Gypsemna Plasterboard Plant is commissioned

Gypsemna Company, one of the new and ambitious projects launched by UAE's Jamal Al Ghurair Group, has successfully commissioned its world-scale Plasterboard Plant in the Industrial City of Abu Dhabi.

With an annual production capacity of 50 million Square metres of various types of Plasterboard, it is the largest Plasterboard plant to be operational in the entire Middle-East Region and is expected to meet the growing demand of Plasterboard in the Region for the large scale commercial and residential projects.

Most of the Plasterboard products consumed in the Region have hitherto been imported. With the commissioning of this world-scale facility, Gypsemna expects to meet the regional demand of plasterboard of various types with very short lead times.

Gypsemna plant has the capacity to produce plasterboards for a wide range of dimensions and sizes i.e. 8 mm to 25 mm thick, 600 to 1350 mm wide and 1800 mm to 4500 mm in length. Also, Gypsemna can meet the requirements of plasterboards of special lengths which are otherwise difficult to be imported.

Besides regular boards, the plant is also capable to produce Moisture and Fire resistant boards as per the requirements of the local and regional construction industry.

Besides Plasterboard, Gypsemna has also made available Calcined Gypsum Powder (also known as Stucco) to the industrial bulk consumers in the UAE and has received good

acceptance.

Gypsemna plans to add other gypsum based products like specialized plasters and blocks into their product range, making it a unique Gypsum based complex in the country.

Being a UAE based manufacturer, Gypsemna is able to meet the local market requirements promptly at short notice. The machinery for this highly automated plant is being supplied by Grenzebach, Germany, an industry leader for equipment for the Gypsum industry.
